CO₂ EMISSIONS FIGURE (g/km)

*The engine is designed for Octane grade 95 fuel; however, it may be run on fuel with a minimum Octane grade of 91.

†Manufacturer’s test results. Actual acceleration results may vary depending on specifications of the vehicle, road and environmental conditions, testing procedures and driving styles. These results should be used for comparison only and verification should not be attempted on public roads.

‡The values of fuel consumptions, CO₂ emissions and energy consumptions shown are determined according to the European Regulation (EC) 715/2007 in the version applicable at the time of type approval. The range shown considers optional equipment and the different size of wheels and tyres available on the selected model and may vary during the configuration.

The values are already based on the new WLTP regulation and are translated back into NEDC-equivalent values in order to ensure the comparison between the vehicles. For the assessment of taxes or other duties based (at least inter alia) on CO₂-emissions the CO₂ values may differ to the values stated here.

Further information on official energy and fuel consumption and the official specific CO₂ emissions of new passenger cars can be found in the “Guide to Fuel Consumption, CO₂ Emissions and Electricity Consumption of New Passenger Cars”, which is available at all outlets free of charge and at http://carfueldata.direct.gov.uk in the United Kingdom, http://www.dat.de/angebote/verlagsprodukte/leitfaden-kraftstoffverbrauch.html in Germany, or your local government authority.
